

# Self reflection

## Introduction:

I'm Cristina Falletta and I come from Belgium. I study to become a preschool teacher in Louvain-La-Neuve.

## Personal level:

I had been informed about this intensive programme. I was so excited about this trip. And I felt myself very happy that I'm a part of a great group.

In these two weeks, I've got my group of work from so many different cultures and countries. (Denmark, Spain, Hungary...) I've learnt a lot of things about these countries. This intensive program taught me to take my place in this group and take decision about the activities or tell my opinion.

When we worked together, it was a real harmony, cooperation and a lot of happiness. Moreover, we transferred this positive energy to the children when we went to the school for the activities. I have met a lot of beautiful people with a lot of generosity and kindness.

By this humane experience, I understood that I have a lot of patience to live with different people.

I appreciated also to share the evening and the dragon story with the all participants.

## Professional development and intercultural perspective:

It was so interesting to hear how the education is going on in Lithuania, Hungary, Spain, Denmark, Portugal and Germany. I learnt a lot of activities about the 5 senses and I wrote these activities in my booklet. I keep this booklet to follow with the future ideas. When I will come to Belgium, I would like to transfer these activities in my training classes. For the future, I would like to make a topic about the park Guell and also to do discovering activities about the language to the Belgium children and to work with 5 senses in my future activities.

I appreciated the flash mob in Park Guell, the Play mobile show in Plaza Catalunya and the Hopscotch in Mont Juic because it was an intensive moment. For these kinds of activities we need to relax and not think about the surrounding (the people...)

I really enjoyed the moment when we went to see the children because on only three moment we had created an atmosphere funny, happy, and feel to be together. We have listening the children and the entire student in my group takes his place for the animation with the children. For me, the language is not a problem because I spoke in Spanish and in English to the children. I think that the language must not to be a problem because we can use the body language.

The most important is the happiness that we transferred to the children. And I was surprised to discover that the children understand very good English.

For me the most important to keep going on imagining, be creative, be friendly, use body language, let the children imagining. And I'm sure that if we use the nature like the learning space, the children will become more creative and more open at the surrounding.

I discovered a beautiful city with amazing stories, with the festival of St Georges, the museum Picasso, the park Guell...

While this two week, I really enjoy all; the activities; the people; the Spanish culture; the city; the children. And the most important, I learned to enjoy the present moment! Here and now!
