

My name is Beatriz Fernandez Flores. I'm from Spain (Madrid). I'm studying in Escuni. This program was really beneficial for me. I've learnt a lot of things about the nature, how to care for the nature, activities to do in there and how to develop the creativity and imagination with all the materials from the nature.

It was a good experience to be in relation with another cultures and students who speak different languages. Sometimes the communication was a little bit difficult for me because I don't have a really high level to speak like some students but I think that I've improved my English.

The workshop with my group was good because we found the connections between us and we had good ideas for the activities for the kids. I just understand a little bit of French so I didn't like when they spoke in French or when the toolbox was corrected in French but I guess that is because we are in Belgium.

I really liked the meeting with kids but I think that I would have liked it more if I understood the language.

I think that the most difficult thing in the workshop was to explain the activities in the good way for everybody to understand what we wanted to say.

In my future I think that this program will help me in my work with the kids because I've got more creativity, imagination and a lot of ideas to make activities even in the nature.

Finally I want to say that the best moment here was the nights from different countries and the relationship with some students who are really nice, specially the Portuguese students.
