

My name is Ester Escobar Guerrero and I am from Spain. I am a student of second of Pre-Primary School and I love children and teaching.

During these two weeks, we have worked very hard. We have used the nature to do different games and we have learnt how we can use it in our classes with children.

I think that the only problem has been the language because children could not understand what we were saying. However the activities with children have been the best of the two weeks. On the other hand I think that this experience has been really

good and very grateful for me because I have known other cultures and other types of education and it is a good thing because I can use this things for other countries in my future class and I think that is really really good. I have learnt different points of view and different ways to work and I think that is good because now, I can do things in

other way and in other form and I can change my opinions about something.

About my personal feeling, I feel well but a little tired because of the hard work. We were working a lot and we have not had much free time. I have learnt how to respect other habits and I have done some friends whose I will never forget because they have been my stay here better and they have helped me when I have needed.

In conclusion I think that I have learnt a lot of new things that I can use in my personal and professional life because they are interesting and useful. I have improved my English and I am satisfied with the work and with my new knowledge.
